Action: Encrypt or Decrypt file

Simple Rule Configuration · https://extensionkit.unitfly.com/documentation/document-processing-action-encrypt-or-decrypt-file/

Configuration options when Action is Encrypt file

If the selected action is **EncryptFile**, the following configuration sections are available:

- Filename Wildcards
- Encryption

Encryption

State Actions > State Action [1] > Action: EncryptFile> Configuration > Encryption

Within this section, the following fields are available: **Encryption type** and **Password**.

Encryption type

State Actions > State Action [1] > Action: EncryptFile> Configuration > Encryption > Encryption type

Specifies the encryption algorithm used to secure the file. Determines the strength and type of encryption applied during the encryption process.

- **AESx128** (default)
- **RC4x40**
- **RC4x128**
- **AESx256**

Password

State Actions > State Action [1] > Action: EncryptFile> Configuration > Encryption > Password

Password used to encrypt the file and restrict access to its contents.

Configuration options when Action is Decrypt file

If the selected action is **DecryptFile**, the following configuration sections are available:

- Filename Wildcards
- Decryption

Decryption

State Actions > State Action [1] > Action: EncryptFile> Configuration > Decryption

Within this section, the **Password** field is available.

Password

State Actions > State Action [1] > Action: EncryptFile> Configuration > Decryption > Password

Password required to decrypt the file and restore access to its contents.
