Delivery notification and Properties

Simple Rule Configuration · https://extensionkit.unitfly.com/documentation/email-integration-delivery-notifications-and-properties/

Delivery notifications

Request delivery notifications from server for sent e-mails. Currently, when enabled, it will add an .eml file to the source object.

- **No (default):** Delivery notifications are not requested.
- **Yes**: Delivery notifications are requested. This will open the **Delivery notifications settings** section for further configuration.

Delivery notifications settings

Delivery notifications: Yes > Delivery notifications settings

Displayed when Delivery notifications is set to Yes.

Specifies e-mail delivery notification settings. When expanded, the **Save delivery notification file to object** field is available.

Save delivery notification file to object

Delivery notifications: Yes > Delivery notifications settings > Save delivery notification file to object

Displayed when Delivery notifications is set to Yes.

Specifies whether the delivery notification should be saved to the object.

- **No (default)**: The notification file will not be saved.

- **Yes**: The notification file will be saved to the object.

Properties

1. Expand the **Properties** section.
2. Click on **Add Property setter**.
3. Expand **Property setter [1]**.

The following fields are available by default: **Property, Value from, Value type, Value, Multi-select lookup & Multi-line text behaviour, Add as additional property,** and **Update option.**
